I. WAGE RATES INDEXES

- 1. This section contains particulars of weighted average minimum weekly and hourly wage rates for adult males and adult females for Australia and each State, together with index numbers with base: year 1954 = 100. Less detailed statistics are first published in the monthly statement, Wage Rates Indexes (Preliminary) (Reference No. 6.37).
- 2. The wage rates used in the compilation of the indexes are the lowest rates for a full week's work (excluding overtime) prescribed for particular occupations. In the majority of cases the rates are prescribed in awards or determinations of Federal or State industrial authorities or in collective agreements registered with them. Rates prescribed in unregistered collective agreements are used where these are dominant in the particular industries to which they refer.
- 3. The Wage Rates Indexes are based on the occupation structure existing in 1954. Weights for each industry and each occupation were derived from two sample surveys made in that year. The first was the Survey of Awards in April 1954, which showed the number of employees covered by individual awards, determinations and collective agreements, and provided employee weights for each industry as well as a basis for the Survey of Award Occupations made in November 1954. This second survey showed the number of employees in each occupation within selected awards, etc. in the various industries, thereby providing occupation weights.
- 4. The minimum wage rates used in the indexes are for representative occupations within each industry. They have been derived entirely from representative awards, determinations and collective agreements in force at the end of each period commencing with March 1939 for adult males and March 1951 for adult females. The current index for adult males includes rates for 3,415 award designations prescribed in 501 awards, determinations and collective agreements. As some of these designations are operative within more than one industry, or in more than one State, the total number of individual award occupations is 2,313. For adult females corresponding numbers are 1,100 award designations, 187 awards, etc. and 515 individual award occupations. By use of the industry and occupation weights derived from the surveys described above, these rates were combined to give weighted averages for each industry group for each State and Australia. Because of coverage difficulties the rural industry is not included in the indexes. A list of the major awards used in the compilation of the wage rates index for adult males, together with explanatory notes, was shown in the July 1974 and August 1974 issue of this publication. The industry weighting pattern of the indexes is shown on page 74 of Labour Report No. 58, 1973.

- Because the indexes are designed to measure movements in prescribed minimum rates of "wages" as distinct from "salaries", those awards, etc. which relate solely or mainly to salary earners are excluded. Thus awards relating to employees in the Finance and Property industry group (banking, insurance, etc.) are excluded as are awards relating to occupations such as engineers, scientists, architects, teachers, nurses, etc. and to administrative employees in government services. Some awards that specify annual rates of pay for certain occupations mainly in government employment (for example, mail officers, postal officers, drivers, linemen, telecommunications technicians, clerks and clerical office machine operators, assistants, typists, telephonists, etc.) are included.
- The rates for particular occupations used in the indexes are prescribed in awards, determinations and collective agreements as set out in paragraph 2 above. Relevant rates of prescribed minimum wages for adult males and adult females (see page 18) are used when applicable. For some occupations general loadings of various kinds are included. Loadings, etc. that are not applicable to all workers in a specified award occupation (for example, those payable because of length of service; working in wet, dirty or confined places; excess fares incurred due to location of building site) are not included in the wage rates indexes. Annual leave loadings, prescribed in many awards, etc., are not included in the wage rates indexes. The ten per cent additions to minimum wage rates for adult males first prescribed in some Western Australian State awards in October 1970 are included in the wage rates. The weekly rates used in the index for occupations specified in the National Building Trades Construction Award include the weekly base rate of pay, the special allowance and the industry allowance.
- 7. In recent years the award rates of pay for some government employees have been based on actual rates of pay for employees in the private sector, which include over-award payments, loadings, etc. Thus award rates of pay for government employees in certain occupations will be higher than those for private employees in comparable occupations. This may affect the relative levels of the weighted average minimum wage rates in industry groups which have a large component of government employees (for example, the Communication group).
- 8. The indexes are designed to measure trends in wage rates in current awards, etc. excluding the effects of changes in the relative importance of industries, awards and occupations. The weighted average wage rates shown in the tables in this section are therefore indexes expressed in money terms, and do not purport to be actual current averages. Similarly, neither these

weighted average wage rates nor the corresponding index numbers measure the relative levels of average current wage rates as between States or industries.

- 9. Since 1954 the industrial structure in Australia has undergone changes which are likely to have had some effects on the representativeness of the regimen of the indexes. These effects are mitigated because occupations in new or expanding industries are often covered by existing awards and the wage rates for new occupations usually conform very closely to those for existing occupations. Also, where an entirely new award has been made and the number of employees affected has warranted such action, occupations from the new award have been introduced into the indexes. These latter cases have not been of great significance.
- 10. Weighted average minimum weekly wage rates for adult males and adult females covered by "Federal awards, etc." and for those covered by "State awards, etc." (as defined below) are shown separately in Tables 5, 6 and 13. The wage rates for these two categories may change at any time as a result of the transfer of particular awards or occupations from one jurisdiction to another.

Relevant definitions are as follows:

"Federal awards, etc." include awards of, or collective agreements registered with, the Australian Conciliation and Arbitration Commission and the Coal Industry Tribunal, and determinations of the Australian Public Service Arbitrator.

"State awards, etc." include awards or determinations of, or collective agreements registered with, State industrial tribunals together with certain unregistered collective agreements where these are dominant in the particular industries to which they refer.

- 11. The proportion of employees covered by Federal and State awards, etc. varies considerably between States. In addition, the proportions of employees engaged in the respective industries and occupations differ from State to State. As a result there may be relatively wide differences between the weighted average wage rates in the several States.
- 12. Weekly wage rates for adult males cannot be compared directly with the average weekly earnings

series shown in Tables 18 and 19 in Section III, because the latter include the actual earnings of all wage earners and salaried employees (whether adult or junior, full-time or part-time, casual, etc.) in all industries. The figures of earnings are quarterly averages and include, in addition to wages and salaries at award, etc. rates, overtime earnings, over-award and bonus payments, and payments made in advance or retrospectively during the periods specified. The series in Table 20, while confined to earnings of full-time adult male wage and salary earners excluding managers, etc., still includes all earnings other than overtime earnings. It therefore cannot be compared directly with weekly wage rates. They also reflect changes in the importance of different industries and occupations. Certain of these differences also apply to the average weekly earnings figures shown in Section IV.

13. Wage rates and index numbers for adult males are available as at the end of each quarter from March 1939 to December 1956 and as at the end of each month from January 1957. Particulars for adult females have been compiled quarterly from March 1951 to June 1967 and monthly from July 1967. For details of wage rates and index numbers from 1939 reference should be made to the following bulletins.

Minimum Wage Rates, March 1939 to June 1965 (Reference No. 6.17)

Wage Rates Indexes, June 1965 to June 1968 (Reference No. 6.21)

Wage Rates Indexes, June 1968 to June 1972 (Reference No. 6.33)

Wage Rates and Earnings, June 1976, (Reference No. 6.16) for final figures July 1972 to June 1975.

Figures subsequent to June 1975 will be found in this bulletin, and in the monthly statements, Wage Rates Indexes (Preliminary) (Reference No. 6.37).

14. In some cases, when awards, etc. are varied, the new wage rates are made retrospective. Also there is generally an unavoidable, and sometimes considerable, delay in the receipt of notification of changes in wage rates in respect of the occupations included in the indexes. Because of these delays, etc., figures for the latest twelve months shown are subject to revision. As such revisions are made they are published in the normal monthly tables of this bulletin. Considerations of space preclude the publication herein of revised figures for each industry group in each State but these are available on request.

⁽a) See paragraph 8, page 2. (b) Figures subject to revision — see paragraph 14, page 3. (c) For mining, wage rates used are those prescribed for the principal mining centres and include lead bonuses, etc. (d) Includes wage rates (and value of keep) for occupations in the coastal shipping service, other than masters, officers and engineers. (e) Excludes rural industry.

TABLE 2. WEEKLY WAGE RATES: ADULT MALES, ALL GROUPS (a)

Weighted average minimum weekly rates payable for a full week's work (excluding overtime), as prescribed in awards, determinations and collective agreements; and index numbers of wage rates.

⁽a) See paragraph 8, page 2. Figures subject to revision — see paragraph 14, page 3. (b) For mining, wage rates used are those prescribed for the principal mining centres and include lead bonuses, etc. (c) Includes wage rates (and value of keep) for occupations in the coastal shipping service, other than masters, officers and engineers. (d) Excludes rural industry.

TABLE 5. WEEKLY WAGE RATES: ADULT MALES (a) FEDERAL AND STATE AWARDS, ETC. (\$)

Weighted average minimum weekly rates payable for a full week's work (excluding overtime), as prescribed in awards, determinations and collective agreements.

⁽a) See paragraph 8, page 2. (b) Figures subject to revision — see paragraph 14, page 3. (c) For mining, wage rates used are those prescribed for the principal mining centres and include lead bonuses, etc. (d) Excludes rural industry, and shipping and stevedoring. The former is not included in the Wage Rates Indexes and for the latter definite particulars for the computation of hourly wage rates are not available.

TABLE 8. HOURLY WAGE RATES: ADULT MALES, ALL GROUPS (a)

Weighted average minimum hourly rates payable and index numbers of hourly rates.

⁽a) See paragraph 8, page 2. Excludes rural industry, and shipping and stevedoring. The former is not included in the Wage Rates Indexes and for the latter definite particulars for the computation of hourly wage rates are not available. Figures for September 1975 and subsequent months are subject to revision — see paragraph 14, page 3.

TABLE 9. WEEKLY WAGE RATES: ADULT FEMALES (a), INDUSTRY GROUPS, 30 SEPTEMBER 1976 (b)

Weighted average minimum weekly rates payable for a full week's work (excluding overtime), as prescribed in awards, determinations and collective agreements; and index numbers of wage rates.

⁽a) See paragraph 8, page 2. Excludes rural industry; mining and quarrying; and building and construction. For definitions, see paragraph 10, page 3. Figures for September 1975 and subsequent months are subject to revision — see paragraph 14, page 3. (b) The wage rates for these two categories may change at any time as a result of the transfer of particular awards or occupations from one jurisdiction to another.

II. BASIC WAGES, MINIMUM WAGES, AND INCREASES IN TOTAL AWARD WAGES

The tables in this section give details of basic wages, minimum wages and increases in award total wages. Information on wage determination in Australia is contained in the Official Year Book and the Labour Report. Figures for earlier periods are published in the Appendix to the Labour Report and in earlier issues of this bulletin.

III. AVERAGE WEEKLY EARNINGS PER EMPLOYED MALE UNIT

This section presents estimates of average weekly earnings of civilian male wage and salary earners for each State and Territory and Australia. These figures are also published in the quarterly statement, Average Weekly Earnings (Reference No. 6.18).

Definition of earnings

- 2. The earnings figures used in the calculation of the averages shown in Tables 18 and 19 comprise award and over-award wages and salaries, the earnings of employees not covered by awards, overtime earnings, bonuses and allowances, commissions, directors' fees and payments made retrospectively or in advance during the quarter. Earnings of part-time as well as full-time employees, and of juniors as well as adults, are included.
- 3. Earnings figures used in calculating the averages shown in Table 20 comprise earnings as defined in the previous paragraph, with the exception of overtime earnings and the earnings of junior employees, part-time employees and managerial, executive, etc., staff.
- 4. For a number of reasons, average weekly earnings per employed male unit cannot be compared directly with the weekly wage rates shown in Tables 1 to 6. The figures in Tables 1 to 6 are weighted average minimum award, etc. rates payable to adult male wage earners in non-agricultural industry for a full week's work, at the end of each month or year. Those in Tables 18 and 19 represent actual average weekly earnings for all wage earners and salaried employees (whether adult or junior, full-time or part-time, casual, etc.) and are quarterly or annual averages.

Method of estimation

- For industries other than agriculture and private domestic service, particulars of employment and wages and salaries are derived from payroll tax returns and from direct returns from government and other bodies. These returns account for approximately 90 per cent of wage and salary earners in these industries, as published the bulletin Employment and monthly in Unemployment (Reference No. 6.4). Estimates are made for the unrecorded balance in terms of both numbers and earnings. The level of average earnings estimated for the unrecorded sector is approximately 80 per cent of the level shown by the direct returns. For agriculture and private domestic service, employment and earnings are estimated from other sources and are included in the calculations.
- 6. For employees reported on more than one payroll, all reported wage and salary earnings are included in calculation of the averages.

Male units

7. Particulars of wages and salaries paid are not available for males and females separately from the sources used for this series; average weekly earnings have therefore been calculated in terms of *male units*, i.e. total male employees plus a proportion of female employees, the proportion being derived from the

estimated ratio of female to male average earnings. Different ratios of female to male average earnings are used for individual States, based on information from regular surveys of weekly earnings and hours and other sources. Ratios used for the current quarter are as follows: New South Wales 67 per cent, Victoria 67, Queensland 65, South Australia 66, Western Australia 62, Tasmania 66, the Northern Territory 65, and the Australian Capital Territory 63. As the number of male units used in calculating Australian average weekly earnings is the sum of the estimates for the States and Territories, a separate ratio for Australia is not used, but the weighted average of the State and Territory ratios is approximately 66 per cent. Changes in these ratios may be necessary from one quarter to the next to reflect, for example, the extension of equal pay provisions, or appreciable and sustained changes in the levels of male overtime earnings. However, small differences in these ratios have relatively little effect on the earnings figures; if the ratio is understated by one percent then average weekly earnings of \$170 would be overstated by about 70 cents.

Seasonally adjusted estimates

Quarterly figures are affected by seasonal influences. For example, special payments, including prepayment for holiday periods, tend to raise the December quarter and to depress the March quarter averages. In addition, figures are affected by the varying number of pay-days in different quarters, (with the exception of Australian Government pay-days in the Northern Territory and the Australian Capital Territory, for which special adjustments have been made in the original series). Allowance for these variations, and for recurring seasonal influences, has been made in calculating the seasonally adjusted estimates for all series shown in Tables 18 to 20. The seasonal adjustment factors were derived from a series from which the influence of major changes in awards and determinations and estimates of the effects of pay-day variations had first been removed. While the seasonally adjusted series retain the effect of the major award, etc. changes, the pay-day effect is excluded. A detailed description of the methods of seasonal adjustment is given in Seasonally Adjusted Indicators, (Reference No. 1.10).

Revisions to the estimates

9. For a number of reasons estimates in these series are subject to revision. The seasonally adjusted estimates generally need to be revised following annual re-analysis of the series. The original estimates are revised whenever the employment series on which they are based is revised, for example, after the incorporation of new benchmarks following a population census. The surveys of earnings and hours, conducted in May and October, generally provide information about the ratio of female to male earnings, overtime earnings and hours and so on, which make it necessary to revise the average weekly earnings estimates. Other revisions are made from time to time as new or revised data become available.

IV. SURVEYS OF EARNINGS AND HOURS OF EMPLOYEES

This section contains results of surveys of earnings and hours of employees. In this issue preliminary results of a sample survey conducted in respect of the pay-period which included 24 May 1976 are published. The survey was designed to provide statistics of the distribution of employees according to weekly earnings and hours, and the composition of weekly earnings and hours for various categories of employees and for the principal occupations.

- 2. Further statistics obtained from the survey will be published progressively as they become available. Similar surveys were conducted in May 1974 and May 1975.
- 3. Because of differences in sample design the results of the survey are not directly comparable with those of other surveys and series such as the October surveys Earnings and Hours of Employees (Reference No.6.40), the May 1971 Survey of Weekly Earnings (Size Distribution) (Reference No. 6.30) and the quarterly series of Average Weekly Earnings (Reference No. 6.18). In the October surveys and the May 1971 survey, adults included persons under 21 years of age who were paid at adult rates; in the May 1974 and later surveys such persons were included with others under 21 years of age.

Scope of survey

 All wage and salary earners were represented except — members of the defence forces, employees in agriculture, employees in private households employing staff, waterside workers employed on a casual basis, persons employed by private employers (other than hospitals) not subject to payroll tax.

At the time of the selection of the sample, payroll tax was payable by employers paying more than \$400 a week in wages and salaries. In general, Australian Government bodies, religious and benevolent institutions, public hospitals and other similar organisations are specifically exempted under the Australian and State Payroll Tax Acts, 1971-75.

Coverage

5. The survey covered all Australian and State Government departments and authorities and stratified random samples of local government authorities, non-government hospitals (not subject to payroll tax) and other private employers.

Survey design

6. The majority of employers selected were requested to supply relevant details, on separate questionnaires, for only a sample of their employees. Individual employees were randomly selected by employers in accordance with instructions supplied by the Bureau. Employers with less than 10 employees were required to complete a questionnaire for every employee.

Definitions

- 7. Specified pay-period is the pay-period which included 24 May 1976. In general, where an establishment was closed down for part or the whole of that pay-period or operations were seriously curtailed by an industrial dispute, breakdown, fire, etc., the employer was asked to supply survey particulars for the previous normal pay-period.
- 8. Employees comprise male and female wage and salary earners (as defined in paragraph 4) who received pay for the specified pay-period.
- 9. Full-time employees are employees who received pay for the specified pay-period and whose standard (or rostered) weekly hours of work (see paragraph 11) for that pay-period were at least 30 hours. Included are full-time employees on short time, full-time employees who began or ceased work during the pay-period and full-time employees on paid annual leave, paid sick leave and paid holidays. Some employees (e.g. aircrews, teachers, university lecturers), although paid for a weekly attendance of less than 30 hours, were classified as full-time.
- 10. For private employees, non-managerial employees were defined to include foremen or supervisory employees, leading hands, apprentices, trainees or cadets, clerical and office staff as well as ordinary wages employees. They exclude managerial, executive, professional and higher supervisory staff who, for the private sector, were not further defined. For government employees, managerial, executive, professional and higher supervisory staff were generally defined as those employees who (i) were ineligible to receive payment for overtime, or (ii) although subject to payment for overtime, were in charge of a significant number of employees in a separate establishment (or establishments).
- 11. Standard (or rostered) weekly hours refers to the number of hours constituting a full week's work for the specified pay-period.
- 12. Weekly hours paid for refers to the hours for which payment was made. It comprises ordinary time hours (see paragraph 13) and overtime hours, which are those in excess of ordinary time hours. Weekly hours paid for were not reported for managerial, executive, professional and higher supervisory staff.
- 13. Ordinary time hours refers to award, standard or agreed hours of work. It includes stand-by or reporting time which are part of standard hours, and that part of paid annual leave, paid sick leave and long-service leave taken during the specified pay-period.
- 14. Weekly earnings refers to gross earnings before taxation and other deductions have been made. It

- comprises overtime earnings, which refers to payment for overtime hours as defined above, and ordinary time earnings, as defined in paragraph 15. It includes one week's proportion of payments made other than on a weekly basis, e.g. salary paid fortnightly or monthly and paid annual or other leave taken during the specified pay-period. Pay in advance, retrospective pay and annual or periodical bonuses, etc. are excluded.
- 15. Ordinary time earnings refers to that part of weekly earnings which is attributable to ordinary time hours, as defined in paragraph 13. It comprises award or agreed base rates of pay for ordinary time hours paid for, including all allowances (other than overtime) specified in the award, etc.; payment by measured result, i.e. payment by piecework, task bonus, commission, etc.; and other earnings, i.e. attendance and good timekeeping bonuses, profit-sharing and any other forms of over-award, etc. pay.
- 16. Median earnings is the amount which divides the distribution into two equal groups, one having earnings above the median and the other having earnings below it. Medians were calculated from grouped data, linear interpolation being used within the class interval in which the median fell.
- 17. Mean (or average) earnings is the amount obtained by dividing the total earnings of a group (e.g. full-time employees) by the number of employees in that group. In calculating the means in Tables 21 and 23 it was assumed that observations were spaced evenly across class intervals, the mid-point of each interval being used in calculating group aggregates.

Reliability of estimates

- 18. As the survey was based on a sample of employers the resultant estimates are subject to sampling variability, that is, variations which might occur by chance because only a sample of employers was surveyed. Information on the reliability of the estimates will be given in *Earnings and Hours of Employees:* Distribution and Composition, May 1976 (Reference No. 6.52).
- 19. The results of this survey may differ slightly from results which would have been obtained had the sample design used in the 1974 and 1975 surveys not been modified for the 1976 survey. The maximum number of employees for which any one employer was required to provide details was raised from 50 for the 1974 and 1975 surveys to 200, and the total number of employees for whom returns were required was reduced from approximately 100,000 in 1974 and 1975 to approximately 80,000 in 1976.
- NOTE. Any discrepancies between totals and sums of components in tables are due to rounding.

TABLE 21. ALL EMPLOYEES (a): WEEKLY EARNINGS, AUSTRALIA, MAY 1976 (b)

⁽a) Refers to employees whose ordinary time hours paid for were at least equal to their standard (or rostered) hours of work. Employees in the lower earnings ranges mainly comprise persons on less than full pay (e.g., on long service leave or sick leave with half pay) at the time of the survey. (b) For definitions see page 22.
